Data

Test Type	Docker Container	CloudLab node-docker
CPU	358.13 events/sec	358.49 events/sec
Memory	3720 MB/s	3727 MB/s
File I/O - Read	0.71 MB/s	0.71 MB/s
File I/O - Write	0.48 MB/s	0.48 MB/s

Data Analysis

- I did not notice much of a difference overall between Docker container and CloudLab node performance. While performance was slightly faster on the CloudLab node, most notably with memory throughput, the differences would not likely be statistically significant if repeated multiple times.
- Based on my observations from part a, I would not expect Docker-based virtualization to have any significant effect on the performance of virtual machines.
